Description

The RV3029C2 is a Real-Time-Clock Module with embedded crystal. This RTC has an I²C Bus (2-wire Serial Interface) and offers temperature compensated time. The STC (Smart Temperature Compensation) can be factory calibrated to achieve a very high time-accuracy of ± 6 ppm from -40°C to +85°C (option A) and ±8ppm from -40°C to +125°C (option D).

Beside standard RTC functions, it includes a Backup-Battery Input with internal switchover function, a programmable trickle-charge circuitry, an integrated temperature sensor with digital output and offers 8 Bytes RAM and 2 Bytes EEPROM for customer application.

The calendar function tracks year and leap-year flags. The clock tracks second, minute and hour in 24-hour format. Programmable alarm setting and universal timer functions increase flexibility.
